

API-650 Tanks are vertically oriented, aboveground, welded storage tanks. Other important features include ratings for internal pressure that approximates atmospheric pressure up to 2.5 PSIG and a uniformly supported bottom.

The API-650 Tank standard is designed to provide industry with a myriad of options that allow engineers to design tanks to safely and adequately store petroleum, petroleum products, and other liquid products.

With its numerous appendices, the API-650 standard accommodates a vast array of engineering specifications ranging from carbon steel, stainless steel and other alloy designs; open top, fixed roof or floating roof designs; high temperature applications up to 500° F and various seismic loadings for field erected and shop built tanks.

All API-650 Tanks manufactured by LIDE Industries are tested according to API-650 standards and are covered under LIDE's standard warranty.
